Willamette Clean-up plan not enough

To ☐ HarborComments

Dear EPA:

I have concerns about the present plan for cleanup.

Specifically:

We need at least 1,000 acres of polluted sediment removed. The present plan leaves far too much of the river contaminated for my grandchildren.

Relying on a quote "monitored natural recovery" is a imaginary hope-- a *do-nothing* plan for pollution to just float down the river, rather than the action we need NOW.

If the cleanup doesn't result in the Fish Consumption Advisory to be removed in the next 10-20 year time frame, we are fooling ourselves.

We must NOT allow our river to be a toxic waste disposal dump: the toxic sediment must be taken to a safe landfill.

The expense of this must be taken up by the entities with liability FOR the pollution they caused. **They are the ones who damaged our wildlife with their careless practices.**

THANK YOU for your attention:
